Reference: Paving Peak 7 Areas

The Red, White & Blue Fire Protection District is in full support of road improvements in the Peak 7 area. With the current road surfaces in the Peak 7 area, even with continual maintenance, road conditions can deteriorate very quickly especially during wet and freeze /melt periods. It is during these times pot holes and wash boarding on the road surface occurs which can cause a slower response of emergency apparatus traveling to calls in the Peak 7 areas. Hard surfaced paved roadways are safer for citizens as well as emergency responders eliminating the danger from vehicle loss of control and damage to vehicles because of road wash boarding and pot holes.

In October of 2017, our Fire District provided significant upgrades to the EMS and All Hazards responses to the entire Peak 7 area with the opening of our station in the Grand Lodge Development. That facility is staffed 24 hours a day, 365 days per year, to provide the most efficient emergency services. Improved roadways will provide for timely and safer responses all year long and in all weather conditions.

Our District supports the efforts of the Peak 7 Neighborhood in working for improved and safer road conditions.

Sincerely,

Chief Jim Keating

Red, White & Blue Fire Protection District
